WESLR INDUSTRIAL

PILOT EXECUTIVE BRIEF

Siemens TIA Engineering Transformation

(c) 2026 WESLR GmbH - Industrial Automation Intelligence

Document generated: April 02, 2026

Confidential - For DACH Region Engineering Partners

SINESS IMPACT & ROI

30%+ reduction in change-management overhead

Zero missed version drift across distributed teams

Confident, auditable rollback capability

Industrial engineering teams face critical challenges with change tracking, version synchronization, and audit compliance. Manual processes and fragmented tooling lead to delays, costly rework, and missed opportunities.

WESLR transforms this landscape by providing real-time visibility, automated change comparison, and complete operational history - all accessible through a modern browser interface without requiring TIA Portal installation.

Key Performance Indicators

Efficiency Gains

* 40% faster change validation
* 30% reduction in engineering overhead
* Instant snapshot access

Quality Metrics

* Zero version drift incidents
* 100% audit trail coverage
* 99.9% data integrity

Technical Architecture & Workflow

Data Flow Architecture

Cloud Infrastructure -> Local Caching -> API Gateway -> Project Snapshots -> Change Detection -> Export & Audit

Real-Time Visibility

* Instant access to latest project state
* Browser-based preview (no TIA install)
* Timestamped snapshots with metadata
* Cross-team synchronization
* Exportable reports (PDF, JSON)
* Revision history with rollback

Automated Analysis

* Object-level diff detection (DBs, FCs, OBs)
* Change categorization by impact

Primary Use Cases

* Post-upgrade validation after Siemens TIA Portal updates
* Offshore coordination with synchronized state checks
* Engineering audits and compliance reporting
* Version drift prevention across distributed teams
* Rapid rollback capability after deployment issues

WESLR

Indus

IN THE PILOT

PILOT DETAILS

Region:

DACH (Germany, Austria, Switzerland)

Target:

5-10 early-adopter Siemens TIA teams

Duration:

8-12 weeks with biweekly feedback syncs

Infrastructure:

Cloud-hosted with local caching support

Deployment:

Within 48 hours of onboarding

Support:

Dedicated Slack + email channel

SLOT AVAILABILITY

Early access slots: 24 per region - Remaining slots: 19 (DACH)

Ready to transform your engineering workflow?

Join the DACH region pilot and experience real-time change visibility, automated analysis, and enterprise-grade audit compliance.
